

## **Abstract: EERQI search and query engine (Berlin, March 17, 2009)**

This presentation gives a brief overview of the current status of the EERQI search and query engine. The EERQI search and query engine makes it possible to search within a number of educational research documents. Some of these documents have been obtained from the publishers involved in the EERQI project, the majority has been downloaded from the WWW. The process of retrieving documents from the WWW (crawling) is explained. The metadata that has been collected for the documents and how it is collected is described. Subsequently usage of the search and query engine including the query syntax is demonstrated.
